

Security Through Community

RITSEC is a cybersecurity club dedicated to molding talented professionals through competitions, meetings, and a supportive community. We meet regularly to discuss research, present on new technology, and integrate learning with hands on experiences.

Competitions

IRSeC (Fall) - A 1-day, red vs blue **competition with a heavy focus on** incident response and reporting. It features business tasks focused on **logging, threat hunting, and email responses** to give a corporate feel. This competition is great for beginners and is internal to RIT. Each blue team has a sponsor as their blue team Coach.

ISTS (Spring) - Information Security Talent Search. A red team of **industry professionals** attacks blue teams from all over the country for 2 days. This competition also includes **CTF** and **King of The Hill** components, as well as the ability for blue teams to attack each other. This competition is entirely student-run and built. **Sponsors are invited** to the event and are encouraged to participate.

Hacker-Thon (Fall) - We spend 24 hours creating a **security related tool or project**. **Tech Talks** are presented throughout the competition by upperclassmen and sponsors. This is a great way for our members to find a side project or dedicate time to one they already have.

CTF (Spring) - This is a student-run **international event**. Challenges are made by **students and sponsors** throughout the year. **900+ teams** compete to earn the most points by solving challenges. Teams of all RIT students are eligible to win prizes.
